Claim 6; Fig 1; 50pp; English.

for for

in cancer The present sequence encodes a human apoptin-associating protein 1 (AAP1). The protein is capable of providing apoptosis. AAP polypeptides and polymucleotides are useful for inducing apoptosis, particularly when apoptosis is p53-independent. They may be used to produce pharmaceutical compositions which are used for treating a disease where enhanced cell proliferation or decreased cell death is observed, particularly in cancer or in autoimmune diseases, for diagnosing a disease related with

```
The present sequence encodes an apoptin-associating proteinaceous substance (apoptin-associating protein 1 (AAP-1), which is capable of inducing apoptosis. AAP-1 polypeptides and polynucleotides are useful for inducing a p51-independent apoptosis. They are used for treating a disease where enhanced proliferation or decreased cell death is observed e.g. cancer or autoimmune disease. They are also used for diagnosis of diseases related with aberrations in the apoptotic process such as cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /*tag= b

The invention provides isolated or recombinant nucleic acid (I), its functional encoding an apoptin-associating proteinaceous (AAP) substance capable of apoptosis. (I), the vector comprising (I), the host cell comprising the vector and the proteinaceous substance encoded by (I) are useful for inducing apoptosis, particularly p53-independent apoptosis, and for treating a disease where enhanced cell proliferation or decreased cell fath is observed, such as cancer or an autoimmune disease. A composition comprising the nucleic acid or the AAP may further be used for diagnosing a disease related with aberrancies in the apoptotic process, and for detecting the presence of cancer cells or cells that are process. The present sequence represents the nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240

```
The present sequence encodes a human apoptin-associating protein 1 (AAPI). The protein is capable of providing apoptosis. AAP polypeptides and polymucleotides are useful for inducing apoptosis, particularly when apoptosis is p53-independent. They may be used to produce pharmaceutical compositions which are used for treating a disease where enhanced cell proliferation or decreased cell deach is observed, particularly in cancer or in autoimmune diseases, for diagnosing a disease related with aberrancies in the apoptotic process, and for detecting the presence of cancer cells or cells that are prone to cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         388
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            383

                                                                                           The present sequence encodes an apoptin-associating proteinaceous substance (apoptin-associating protein 1 (AAP-1), which is capable of inducing apoptosis. AAP-1 polypeptides and polynucleotides are useful for inducing a p53-independent apoptosis. They are used for treating a disease where enhanced proliferation or decreased cell death is observed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ठ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention provides isolated or recombinant nucleic acid (1), its functional encoding an apoptin-associating proteinaceous (AAP) substance capable of apoptosis. (1), the vector comprising (1), the host cell comprising the vector and the proteinaceous substance encoded by (I) are useful for inducing apoptosis, particularly p53-independent apoptosis, and for treating a disease where enhanced cell proliferation or decreased cell death is observed, such as cancer or an autoimmune disease. A composition comprising the nucleic acid or the AAP may further be used for diagnosing a disease related with aberrancies in the apoptotic process, and for detecting the presence of cancer cells that are prone to cancer. The present sequence represents the nucleotide sequence of the AAP-1-b protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to the isolation of novel genes (ACF34446-ACF34559) encoding proteins (ABR64180-ABR64281) involved in the process of angiogenesis. The nucleic acid molecules are useful in identifying and/or obtaining full-length human eness involved in an angiogenic process. The nucleic acid molecule, polypeptides or complexes encoded, cells or genetically modified non-human animals derived from these are useful for the screening of candidate pharmaceutical compounds used in treating angiogenesis related disorders. They are also useful for diagnosing, prognosticating or treating an angiogenesis or is a disorder in which a decreased vasculature is of benefit (e.g. cancer, rheumatoid arthritis, involves uncontrolled or enhanced angiogenesis or is a disorder in which a decreased vasculature is of benefit (e.g. cancer, rheumatoid arthritis, diabetic retinopathy, psoriasis or cardiovascular diseases such as atherosclerosis), or involves inappropriately arrested or decreased angiogenesis or is a disorder in which an expanding vasculature is of benefit (e.g. ischemic limb disease or coronary artest disease). The mucleic acid sequence is useful for manufacturing a medicament for the nucleic acid sequence is related disorder. This sequence corresponds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  338

The invention relates to an inhibitory RNA (RNAi) molecule derived from a nucleic acid molecule comprising a defined nucleic acid sequences given in the specification or a sequence which hybridizes to the sequences and encodes a Notch signaling target gene or which is a degenerate as a result of the genetic code of the sequences. The methods and compositions of the present invention are useful for manipularing the phenotype of stem cells, preferably pluripotent stem cells. This sequence corresponds to one of the nucleic acid molecules of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   803
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CGACCTCTTAGTGATGCTGCCAGGATAATTTCTGCTTGCCATGGGCATCTGGCCACCAAG 914

```

The invention relates to a method of classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-like tumor by: (1) determining a pattern of expression in the ovarian tumor of several markers given in the specification; and (2) comparing a similarity of the pattern of expression of the markers in the ovarian tumor to a pattern of expression of the markers in the ovarian tumor to a pattern of expression of the markers in a comparison tissue of a known BRCA-1-like or BRCA-2-like or non-BRCA-like tumor. The method is useful for classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-like tumor. This sequence corresponds to an ovarian cancer -related gene having an altered pattern of expression in ovarian cancer. (Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from WIPO at ö Classifying an ovarian tumor as a BRCA-1-like or BRCA-2-like or non-BRCA-like tumor by determining a pattern of expression in the ovarian tumor of several markers. 194 143 254 203 314 aagttgaaaagcagcacaaagagaacctgagaaagacaaggaaattagtcctagtgt 263 83 975 TTTCCTAACAATCATTTATAATTGGATGTGCTCCTGAATCTACTTTTAATAAAAA 1031 Ovarian cancer-related DNA #554 with altered ovarian cancer expression. This invention relates to novel human genes and gene product which are implicated in certain disease states. Compounds which modulate the proteins of the invention may have cytostatic, antiinflammatory, ophthalmological, antiarteriosclerotic or vulnerary activities. The sequences of the invention may be useful for gene therapy. The invention may be useful for gene therapy. The invention may be useful for gene therapy. The invention way be useful for gene therapy. The invention way be useful for diagnosing or treating a hypoxia-regulated condition, such as tumourigenesis, anglogenesis, apoptosis, inflammation, erythropoisess or the biological response to hypoxia conditions including processes such as glycolysis, gluconeogenesis, glucose transportation, catecholamine synthesis, iron transport or nitric oxide synthesis. The disease includes cancer, ischaemic conditions, reperfusion inflammatory conditions or wound healing. The present sequence is that of a disease related protein encoding DNA sequence of the invention.
                                                                                                                                                                                                                                                                             New substantially purified polypeptide, useful for diagnosing or treating a hypoxia-regulated condition, such as cancer, ischemia, reperfusion injury, retinopathy, pre-eclampsia, atherosclerosis, inflammation, or wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         319
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     143

Novel polypeptides and polynucleotides useful as diagnostic reagents to diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, and for treating cancers, rheumatoid arthritis.

The present invention relates to the isolation of novel human neoplastic disease associated polypeptides (AAU21568-AAU21851), and cDNA and DNA sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative disorders (e.g. leukasemia, bone cancer, bladder cancer, brain stem glioma, adult liver cancer, childhood cerebellar astrocycoma, or Hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders under alsorders, immune system disorders, muscullar disorders cardiovascular disorders, astrointestinal disorders, pulmonary disorders, cardiovascular disorders and renal in gene therapy. AAS34767-AAS35050 represent cDNA sequences encoding for the novel human neoplastic disease associated polypeptides of the the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                            Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to one of 238 disclosed human neoplastic disease-
associated polypeptides encoded by 171 disclosed CDNA sequences
(including their domains, epitopes, full-length proteins, allelic variants
or species homologues). Also included are there encoding nucleic acids, a
recombinant vector comprising the nucleic acid, a recombinant host cell
comprising the nucleic acid (expressing the protein), an isolated
antibody that binds specifically to the local and partering,
treating or ameliorating a medical condition, diagnosing a pathological
condition or a susceptibility to a pathological condition in a subject,
identifying a binding partner to the polypeptide, identifying an activity
in a biological assay, and the gene corresponding to the CDNA sequence.
The polypeptides, polynucleotides and antibodies are useful for
aneliorating preventing, diagnosing, prognosticating, treating or
aneliorating medical conditions such as hyperproliferative diseases or
cancer, autoimmune disorders (e.g. diabetes, rheumatoid arthritis,
systemic lupus erythematosus, multiple sclerosis, autoimmune thyroiditis
or haemolytic anaemia), haematopoietic or haematologic disorders (e.g.
canaemia or thrombocytopaenia), elegic reactions including asthma or
cecema, inflammatory disorders (e.g. ischaemia-reperfusion injury,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polynucleotides, useful for diagnosing, preventing, prognosticating or treating medical conditions such as cancer, AIDS, diabetes or Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       183

The invention relates to an isolated polymucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (BST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The present sequence is useful for generating antibodies specific for it. The present sequence for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030073623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GCTGAAAAACGTGGACAGGAGCACTGCACAGCAGTTGGCAGTAACTGTGGGCAACGTCAC 456
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          caagegerecrececrecececeaaagegegacarereacagecaareareaare 307

                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TGAAATTGCACATGGAATTGTGAAAACTATGAATCAGGGTATGAAATTCAAAACCTCCAC 700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                           Probe #4676 for gene expression analysis in human cervical cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ATTATCACAGACTTTAAGGAAAAAGACTCGCTCCTCATCGACATCCTCATCCACAGTGACC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1318, Application US/09902540

Sequence 1318, Application US/09902540

Patent No. 683347

GENERAL INFORMATION:

APPLICANT: Goldman, Barry S.

APPLICANT: Slater, Steven C.

APPLICANT: Slater, Steven C.

TITLE OF INVENTION: Myxococcus xanthus Genome Sequences and Uses Thereof

TITLE OF INVENTION: Mysococcus xanthus Genome Sequences and Uses Thereof

FILE REFERENCE: 38-10(15849)B

CURRENT FILING DATE: 2001-07-10

PRIOR PILING DATE: 2001-07-10

PRIOR FILING DATE: 2000-07-10

PRIOR FILING DATE: 2000-07-10

NUMBER OF SEQ ID NOS: 16825

SEQ ID NO 1318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Sequence 29, Application US/08520678A

Sequence 29, Application US/08520678A

Patent No. 5874565

GENERAL INFORMATION:

APPLICANT: Rice, Charles M.

APPLICANT: Kolykhalow, Alexander A.

TITLE OF INVENTION: NOVEL 3' TERMINAL SEQUENCE OF HEPATITIS

TITLE OF INVENTION: C VIRUS GENOWE AND DIAGNOSTIC AND THERAPEUTIC USES THEREOF

NUMBER OF SEQUENCES: 39

CORRESPONDENCE ADDRESS:

ADDRESSEE: Howell & Haferkamp, L.C.

STREET: 7733 Forsyth Blvd., Suite 1400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
